

OpenLCB Standard	
OpenLCB Event Identifiers	
10/08/10	Draft

1 Introduction (Informative)

This specification describes the format and allocation of OpenLCB event identifiers (event IDs). It is not specific to any wire protocol.

2 References and Context (Normative)

- 5 This specification is in the context of the OpenLCB-CAN ... Specification, which specifies ...

2.1 Format

An OpenLCB event identifier (node ID) shall be eight bytes of eight bits each.

- 10 The order of bytes in an OpenLCB event ID shall be considered significant. The most-significant byte shall be transmitted first during communication operations. The most-significant byte shall be written first (left-most in Western format) in any human-readable representation.

OpenLCB event IDs shall include one or more 1 bits.

2.2 Allocation

15
