

OpenLCB Technical Note	
OpenLCB Node Identifiers	
10/08/10	Draft

## 1 Introduction

This explanatory note contains informative discussion and background for the corresponding “OpenLCB Node ID Specification”. This explanation is not normative in any way.

## 2 Annotations to the Specification

- 5 This section provides background information on corresponding sections of the Specification document. It's expected that two documents will be read together.

### 2.1 Introduction

### 2.2 References and Context

### 2.3 Format

- 10 The specification doesn't require any particular human-readable format, but hex-pairs with separators are strongly suggested, e.g. 01.AB.34.01.CD.E3; decimal pairs could also be used, but in that case it's important to provide a way to know which is use.

Below this is just a collection of pieces from other docs right now.
