DUAL DIGITAL ISOLATORS

Check for Samples: ISO7220A, ISO7220B, ISO7220C, ISO7220M, ISO7221A, ISO7221B, ISO7221C, ISO7221M

FEATURES

www.ti.com

- 1, 5, 25, and 150-Mbps Signaling Rate Options
 - Low Channel-to-Channel Output Skew;
 1 ns max
 - Low Pulse-Width Distortion (PWD);
 1 ns max
 - Low Jitter Content; 1 ns Typ at 150 Mbps
- Typical 25-Year Life at Rated Voltage (see app. note SLLA197 and Figure 20)
- 4000-V_{PK} V_{IOTM}, 560 V_{PK} V_{IORM} per IEC 60747-5-2 (VDE 0884, Rev2)
- UL 1577, IEC 61010-1, IEC 60950-1 and CSA Approved
- 50 kV/µs Typical Transient Immunity
- Operates with 2.8-V (C-Grade), 3.3-V or 5-V Supplies

- 4 kV ESD Protection
- High Electromagnetic Immunity
- –40°C to 125°C Operating Range

APPLICATIONS

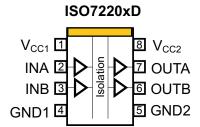

- Industrial Fieldbus
 - Modbus
 - Profibus™
 - DeviceNet™ Data Buses
- Computer Peripheral Interface
- Servo Control Interface
- Data Acquisition

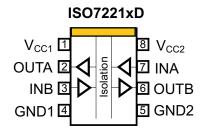

DESCRIPTION

The ISO7220 and ISO7221 are dual-channel digital isolators. To facilitate PCB layout, the channels are oriented in the same direction in the ISO7220 and in opposite directions in the ISO7221. These devices have a logic input and output buffer separated by Tl's silicon-dioxide (SiO_2) isolation barrier, providing galvanic isolation of up to 4000 V_{PK} . Used in conjunction with isolated power supplies, these devices block high voltage, isolate grounds, and prevent noise currents on a data bus or other circuits from entering the local ground and interfering with or damaging sensitive circuitry.

A binary input signal is conditioned, translated to a balanced signal, then differentiated by the capacitive isolation barrier. Across the isolation barrier, a differential comparator receives the logic transition information, then sets or resets a flip-flop and the output circuit accordingly. A periodic update pulse is sent across the barrier to ensure the proper dc level of the output. If this dc-refresh pulse is not received every 4 μ s, the input is assumed to be unpowered or not being actively driven, and the failsafe circuit drives the output to a logic high state.

The small capacitance and resulting time constant provide fast operation with signaling rates available from 0 Mbps (dc) to 150 Mbps. (1) The A-, B- and C-option devices have TTL input thresholds and a noise filter at the input that prevents transient pulses from being passed to the output of the device. The M-option devices have CMOS $V_{\rm CC}/2$ input thresholds and do not have the input noise-filter and the additional propagation delay.

(1) The signaling rate of a line is the number of voltage transitions that are made per second expressed in the units bps (bits per second).

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

DeviceNet is a trademark of Open DeviceNet Vendors Association.

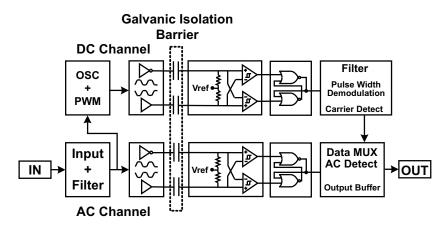

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

DESCRIPTION CONTINUED

These devices require two supply voltages of 2.8 V (C-Grade), 3.3 V, 5 V, or any combination. All inputs are 5-V tolerant when supplied from a 2.8-V or 3.3-V supply and all outputs are 4-mA CMOS.

These devices are characterized for operation over the ambient temperature range of -40°C to 125°C.

| T_{J} | Junction temperature | Junction temperature | | | 150 | °C |
| Н | External magnetic field-strength immunity per IEC 6 | 1000-4-8 & IEC 61000-4-9 certification | | | 1000 | A/m |

⁽¹⁾ For the 5-V operation, V_{CC1} or V_{CC2} is specified from 4.5 V to 5.5 V. For the 3.3-V operation, V_{CC1} or V_{CC2} is specified from 3 V to 3.6 V. For the 2.8-V operation, V_{CC1} or V_{CC2} is specified at 2.8 V.

⁽²⁾ All voltage values except differential I/O bus voltages are with respect to network ground terminal and are peak voltage values.

⁽²⁾ Typical signaling rate and Input pulse width are measured at ideal conditions at 25°C.

DEVICE INFORMATION

IEC PACKAGE CHARACTERISTICS

| | PARAMETER | TEST CONDITIONS | | MIN | TYP | MAX | UNIT |
|-----------------|--|---|--------------|-------|-------------------|-----|------|
| L(I01) | Minimum air gap (Clearance) | Shortest terminal-to-terminal distance through air | | 4.8 | | | mm |
| L(102) | Minimum external tracking (Creepage) | Shortest terminal-to-terminal distance across the package surface | SOIC-8 | 4.3 | | | mm |
| CTI | Tracking resistance (Comparative Tracking Index) | DIN IEC 60112 / VDE 0303 Part 1 | • | ≥400 | | | V |
| | Minimum Internal Gap (Internal Clearance) | Distance through the insulation | | 0.008 | | | mm |
| R _{IO} | Isolation resistance | Input to output, V_{IO} = 500 V, all pins on each side barrier tied together creating a two-terminal device $T_A < 100^{\circ} C$ | of the e, | | >10 ¹² | | Ω |
| | | Input to output, V _{IO} = 500 V, 100°C ≤ T _A ≤ max | | | >10 ¹¹ | | Ω |
| C _{IO} | Barrier capacitance Input to output | $V_1 = 0.4 \sin (4E6\pi t)$ | | | 1 | | pF |
| C _I | Input capacitance to ground | $V_I = 0.4 \sin (4E6\pi t)$ | | | 1 | | pF |

NOTE: Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed circuit board do not reduce this distance.

Creepage and clearance on a printed circuit board become equal according to the measurement techniques shown in the *Isolation Glossary*. Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications.

DEVICE I/O SCHEMATICS

IEC SAFETY LIMITING VALUES

Safety limiting intends to prevent potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the IO can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier potentially leading to secondary system failures.

| | PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|----|--------------------------|--------|--|-----|-----|-----|------|
| | Safety input, output, or | SOIC-8 | $\theta_{JA} = 212^{\circ}\text{C/W}, \ V_{I} = 5.5 \ \text{V}, \ T_{J} = 170^{\circ}\text{C}, \ T_{A} = 25^{\circ}\text{C}$ | | | 124 | A |
| IS | supply current | 30IC-8 | $\theta_{JA} = 212^{\circ}\text{C/W}, \ V_{I} = 3.6 \ \text{V}, \ T_{J} = 170^{\circ}\text{C}, \ T_{A} = 25^{\circ}\text{C}$ | | | 190 | mA |
| Ts | Maximum case temperature | SOIC-8 | | | | 150 | °C |

The safety-limiting constraint is the absolute maximum junction temperature specified in the absolute maximum ratings table. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the Thermal Characteristics table is that of a device installed in the JESD51-3, Low Effective Thermal Conductivity Test Board for Leaded Surface Mount Packages and is conservative. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

ISOLATION GLOSSARY

Creepage Distance — The shortest path between two conductive input to output leads measured along the surface of the insulation. The shortest distance path is found around the end of the package body.

Clearance — The shortest distance between two conductive input to output leads measured through air (line of sight).

Input-to Output Barrier Capacitance — The total capacitance between all input terminals connected together, and all output terminals connected together.

Input-to Output Barrier Resistance — The total resistance between all input terminals connected together, and all output terminals connected together.

Primary Circuit — An internal circuit directly connected to an external supply mains or other equivalent source which supplies the primary circuit electric power.

Secondary Circuit — A circuit with no direct connection to primary power, and derives its power from a separate isolated source.

Comparative Tracking Index (CTI) — CTI is an index used for electrical insulating materials which is defined as the numerical value of the voltage which causes failure by tracking during standard testing. Tracking is the process that produces a partially conducting path of localized deterioration on or through the surface of an insulating material as a result of the action of electric discharges on or close to an insulation surface -- the higher CTI value of the insulating material, the smaller the minimum creepage distance.

Generally, insulation breakdown occurs either through the material, over its surface, or both. Surface failure may arise from flashover or from the progressive degradation of the insulation surface by small localized sparks. Such sparks are the result of the breaking of a surface film of conducting contaminant on the insulation. The resulting break in the leakage current produces an overvoltage at the site of the discontinuity, and an electric spark is generated. These sparks often cause carbonization on insulation material and lead to a carbon track between points of different potential. This process is known as *tracking*.

www.ti.com

INSTRUMENTS

Insulation:

Operational insulation — Insulation needed for the correct operation of the equipment.

Basic insulation — Insulation to provide basic protection against electric shock.

Supplementary insulation — Independent insulation applied in addition to basic insulation in order to ensure protection against electric shock in the event of a failure of the basic insulation.

Double insulation — Insulation comprising both basic and supplementary insulation.

Reinforced insulation — A single insulation system which provides a degree of protection against electric shock equivalent to double insulation.

Pollution Degree:

Pollution Degree 1 — No pollution, or only dry, nonconductive pollution occurs. The pollution has no influence.

Pollution Degree 2 — Normally, only nonconductive pollution occurs. However, a temporary conductivity caused by condensation must be expected.

Pollution Degree 3 — Conductive pollution occurs or dry nonconductive pollution occurs which becomes conductive due to condensation which is to be expected.

Pollution Degree 4 - Continuous conductivity occurs due to conductive dust, rain, or other wet conditions.

Installation Category:

Overvoltage Category — This section is directed at insulation co-ordination by identifying the transient overvoltages which may occur, and by assigning 4 different levels as indicated in IEC 60664.

- I: Signal Level Special equipment or parts of equipment.
- II: Local Level Portable equipment etc.
- III: Distribution Level Fixed installation
- IV: Primary Supply Level Overhead lines, cable systems

Each category should be subject to smaller transients than the category above.

| • | Added the APPLICATION INFORMATION section to the data sheet | 20 |
| • | Added the ISOLATION GLOSSARY section to the data sheet | 21 |

Changes from Revision B (May 2007) to Revision C Page Added Figure 17 cross reference to the Peak-to-peak eye-pattern jitter of the SWITCHING CHARACTERISTICS Added Figure 17 cross reference to the Peak-to-peak eye-pattern jitter of the SWITCHING CHARACTERISTICS table 6 Added Figure 17 cross reference to the Peak-to-peak eye-pattern jitter of the SWITCHING CHARACTERISTICS Added Figure 17 cross reference to the Peak-to-peak eye-pattern jitter of the SWITCHING CHARACTERISTICS Changed the IEC 60664-1 RATINGS TABLE - Specification I-III test conditions From: Rated mains voltage ≤150 Changes from Revision C (May 2007) to Revision D Page Changes from Revision D (June 2007) to Revision E Page Changes from Revision E (July 2007) to Revision F **Page** Added t_{sk(pp)} footnote to the SWITCHING CHARACTERISTICS: V_{CC1} at 5 V, V_{CC2} at 3.3 V OPERATION table 6 Changes from Revision F (August 2007) to Revision G Page Added Part Numbers ISO720B and ISO7221B to the ELECTRICAL CHARACTERISTICS: V_{CC1} and V_{CC2} at 5-V Added Part Numbers ISO720B and ISO7221B to the ELECTRICAL CHARACTERISTICS: V_{CC1} at 5 V, V_{CC2} at 3.3 V Added Part Numbers ISO720B and ISO7221B to the ELECTRICAL CHARACTERISTICS: V_{CC1} at 3.3 V, V_{CC2} at 5 V Added Part Numbers ISO720B and ISO7221B to the ELECTRICAL CHARACTERISTICS: V_{CC1} and V_{CC2} at 3.3 V9

| | nanges from Revision G (March 2008) to Revision H | age |
|---|---|---------------------------|
| • | Added Note: (1) to the RECOMMENDED OPERATING CONDITIONS table | 3 |
| • | Added Note: (1) to the ELECTRICAL CHARACTERISTICS: V _{CC1} and V _{CC2} at 5-V table | 4 |
| • | Added Note: (1) to the ELECTRICAL CHARACTERISTICS: V _{CC1} at 5 V, V _{CC2} at 3.3 V table | 5 |
| • | Added Note (1): to the ELECTRICAL CHARACTERISTICS: V _{CC1} at 3.3 V, V _{CC2} at 5 V table | 7 |
| • | Added Note (1): to the ELECTRICAL CHARACTERISTICS: V _{CC1} and V _{CC2} at 3.3 V | |
| Ch | nanges from Revision H (May 2008) to Revision I | age |
| • | Added "IEC 61010-1, IEC 60950-1 and CSA Approved" to the UL 1577 FEATURES bullet | 1 |
| Ch | nanges from Revision I (December 2008) to Revision J | age |
| • | Changed ISO7221C Marked As column From: TI7221C To: I7221C in the AVAILABLE OPTIONS table | 2 |
| Ch | nanges from Revision J (May 2009) to Revision K | age |
| • | Changed column 2 of the AVAILABLE OPTIONS table From: Signaling Rate To: Max Signaling Rate | 2 |
| • | Changed the the RECOMMENDED OPERATING CONDITIONS so that Note (2) is associated with all device options in the Input pulse width and Signaling rate | |
| • | Changed Note (2) From: Typical signaling rate under ideal conditions at 25°C. To: Typical signaling rate and Input pulse width are measured at ideal conditions at 25°C. | |
| Ch | nanges from Revision K (January 2010) to Revision L | |
| | | age |
| | Changed Feature From: 4000-V _{peak} Isolation, 560 V _{peak} V _{IORM} To: 4000-V _{PK} V _{IOTM} , 560 V _{PK} V _{IORM} per IEC 60747-5-2 (VDE 0884, Rev2) | |
| • | Changed Feature From: 4000-V _{peak} Isolation, 560 V _{peak} V _{IORM} To: 4000-V _{PK} V _{IOTM} , 560 V _{PK} V _{IORM} per IEC 60747-5-2 (VDE 0884, Rev2) | 1 |

⁽¹⁾ The marketing status values are defined as follows: **ACTIVE:** Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

PACKAGE OPTION ADDENDUM

4-Jan-2012

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PLASTIC SMALL OUTLINE

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
- Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
- E. Reference JEDEC MS-012 variation AA.

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

NOTES:

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Publication IPC-7351 is recommended for alternate designs.
- D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
- E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

Applications

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
